

```
25  *   - Adafruit 10-DOF breakout: LSM303DLHC (accel+mag) + L3GD20 (gyro) +
26  *     BMP180 (baro, not currently used) - same sensor family as the
27  *     diymore board, different specific chip variant, hence Adafruit's own
28  *     libraries + proven tilt-compensated orientation math instead of the
29  *     Pololu LSM303 driver the S3 draft used.
```
